

# HALL FARMS

## Premium Straw Blankets

*Your Direct Supplier of Erosion Control Products*

### Manufacturers of The Better Blanket

#### Using "The Better Blanket"

- ★ Straw Blankets prevent soil, seed, fertilizer, and straw displacement by water impact, water flow, and wind erosion.
- ★ Straw Blankets promote faster seed germination, quick grass establishment, and excellent weed suppression.
- ★ Contractors, soil conservationists, And farmers have given called Hall Farms straw blankets the "Better Blanket" due to the high quality weed-free straw, more straw spread evenly across the blanket, full thread counts, and easy unroll center cores.
- ★ Tests show sediment losses with Straw Blankets are 100x less than bare soil plots, and 10x less than blown straw mulch.

#### Without "The Better Blanket"

Sediment is the leading pollutant to receiving waterways, restricting channel flow resulting in frequent flooding.

Germination times are delayed due to lack of moisture content, allowing weeds to out-compete desirable grasses and cover crops.

Straw Blankets are now required to be installed in agricultural waterways in the State of Indiana, and many counties in Ohio, Kentucky, and Illinois.

Six million tons of soil erode each year in Indiana, and 75 billion tons annually worldwide costing \$400 billion.
